10. Abstract
The Environmental Protection Agency (EPA) has imposed minimum monitoring requirements on bleached papergrade kraft and soda (Subpart B) mills under 40 CFR Part 430 as part of the final Cluster Rules promulgated on April 15, 1998. These provisions require direct and indirect discharging Subpart B mills to monitor their effluent for certain pollutants, including chloroform, at specified frequencies. EPA is now promulgating an amendment to the Cluster Rules to allow direct and indirect discharging Subpart B mills to demonstrate compliance with applicable chloroform limitations and standards under 40 CFR Part 430 in lieu of monitoring at a fiber line required by 40 CFR 430.02 by certifying (1) that the fiber line is not using elemental chlorine or hypochlorite as bleaching agents and (2) that it also maintains certain process and operating conditions identified during the initial compliance demonstration period of not less than two years, where the facility must monitor for chloroform at the minimum frequency required by 40 CFR 430.02, at a minimum, to demonstrate compliance with applicable chloroform limitations. These mills must submit a report summarizing the results of the initial compliance demonstration period and subsequently submit periodic certification reports confirming that the participating fiber line continues to operate within the range of process and operating conditions documented during the initial compliance demonstration period.
